NAME

getmima - get the mimimum and maximum of a field on a netCDF file, interpolated either to a pressure or an isentropic surface.

SYNOPSIS

getmima *filename field [Pval | Tval]*

DESCRIPTION

Interpolate the field "field" of a netCDF file "filename" either onto a pressure surface "Pval" or onto an isentropic surface "Tval", where the level is given in hPa or K, respectively.
